

Security Camera to MMS Phone

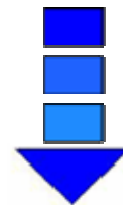

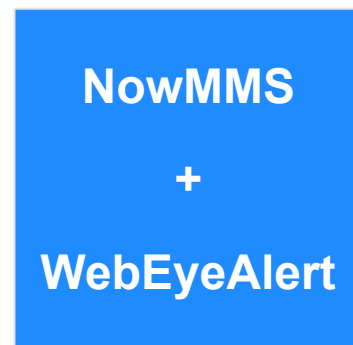

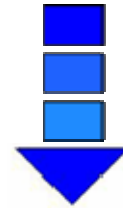

A complete solution for delivery of security images to you mobile.

Now Wireless is now providing total solutions for delivering images from security cameras direct to your MMS capable mobile phone. With integrated digital recording and Web server technology,

Using our latest technology products we are able to send an image of any alert from your security camera direct to your mobile phone. When the camera is triggered, you will see the image that triggered it! This powerful tool allows you to make decisions as soon as an issue arises.

WebEyeAlert's family of digital video recording products secures and monitors people, facilities and assets in a wide range of security applications. The product family's industry-leading Web-enabled remote access, highly scalable architecture, and cost effectiveness make it one of the best value propositions in the security industry.

WebEyeAlert provides an advanced yet user-friendly security system that is customizable, scalable, and remotely accessible from any networked PC.

Protect your business premises, home or other valuable assets from being stolen or vandalised, have security recordings and image alerts of all activity and triggered events.
